Presentation of the new book on the mineral ones of the veronese

Friday 2 May is inaugurated near the fair in Verona the fortieth one of the Mineral Show edition

Characterized Geo Business this year from a thick presence of exhibitors of worked and bijotteria with a light bending for the mineral ones and the fossils.

At the 10, near the gallery expo, to the alderman's presence to the Culture of the Commune in Verona dr.ssa Erminia Perbellini and to the Manager of the Civic Museum of Natural History Dr.ssa Alessandra

Aspes, the presentation of the book " will be held Mineral of the Veronese - the secondary mineralizzazione of the volcanic rocks of the Lessini " Mountains authors: Michael Mattioli, Mark Cenni and Giuliana Raffaelli I edit in collaboration between the local naturalistic Museum and the Mineralogical Geologic Association Veronese.

An important study on the geology of the veronese fruit as motto of the triplex collaboration among

Civic museum, University of Urbino and A.G.M.V that for 5 years you/he/she has lavished a scholarship with this finality.

You also introduce this year the laboratories of more important analysis of Italy that ofriranno to the public free consultations, the mining institute of Agordo e, due new entry, the Museum Zannato of Montecchio Maggiore and the Regional Park of the Lessinia that it will expose together with the Museum of Natural History in Verona.

Almost ventimila square meters of exposure, exhibiting trecentottanta coming from the whole world, more than centomila the exposed champions, a true garden of the wonder, a sparkling of colors, geometric shapes, authentic eccentricities of the nature will attract in Verona, near the district fair about ten thousand of visitors some impassioned ones, some attracted by the magnificent exposure of hard and semi-precious stones that so much success has in these years and not only near the female public.

Marvelous and gigantic geodi of Quartz jalino or ametistino of the weight of varied hundred kilograms will contend him with the superb plates of fishes fossils of Lebanon the scepter of queen

of the saloon, without forgetting the many colored wood sections silicizzato coming from the Arkansas or from Brazil that they tell the history of ancient old forests of about ten million of years.

Precious stones and seeds precious they will be alternated to hard stones with delicate overlaps of colors

from the blù of the Sapphire to the blù of the Lapis lazuli, from the red of the Ruby to that of the Tormalina variety Rubellite, from the green Emerald to that of the Pomegranate Tsavorite.

A color palette from the endless tonalities cleverly mails in prominence from the ability of the cutters of stones that with Carthusian patience and endless studies they have first sgrezzato and then finished up and polished a small bit of mineral actually to make a splendid gem become him/it.

You/he/she can seem unbelievable but, every single stone, belonging however to the same family, it is not never equal to the other, dwarfish inclusions always differentiate her/it; who possesses a gem it possesses therefore an unique and inimitable small portion of servant, a small treasure.

But the novelties for the naturalists don't stop here him, in fact marvelous shells coming from the tropical warm seas, Cipree, Strombus, Pectinidi and so many other will do the joy of the impassioned ones and the collectors.

The continuous merceologia to become larger, has however, in fact the presence of exhibitors of cut cars of the stones, stereoscopic microscopes and equipments more common than they induce the visitors to draw near to this fascinating world.

The open fair actually to Sunday 4 May will have free entry with schedule 9-18.
